DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shioda et al.(Shioda)(JP 10-277,707), Snider et al.(Snider)(US 5,861,689), and Bell (US 6,202,285). Shioda teaches a stator with a laminated core with a three phase winding in a plurality of slots with a shield including a conductive layer 5 between the winding 3 and the laminated core with an insulation layer 4 between the shield and the core, and an insulation layer 25, 26 between the shield and the winding. The shield being grounded to the core through the insulation 25, 26, it is inherent that the structure reduces capacitive currents in the stator. Shioda teaches every aspect of the invention except the coil grounded only on the current fed side of the winding and a shaft supported by bearings. Snider teaches the stator grounded on the same side as the stator windings and a motor shaft 30. Bell teaches a motor with a shaft supported by bearings where the coils are shielded to prevent bearing breakdown. It would have been obvious to a person of ordinary skill in the art at the time of the invention to construct the motor of Shioda with the winding shield grounded on the same side as the stator terminals to simplify electrical connections to the motor as in Snider, and with the

shaft of Shioda to provide rotary output from the machine, and with the coils insulation being grounded to prevent bearing breakdown, as taught by Bell.
